Transarterial chemoembolization: Evidences from the literature and applications in hepatocellular carcinoma patients

Antonio Facciorusso, Raffaele Licinio, Nicola Muscatiello, Alfredo Di Leo, Michele Barone

Abstract

Transarterial chemoembolization (TACE) is the current standard of care for patients with large or multinodular hepatocellular carcinoma (HCC), preserved liver function, absence of cancer-related symptoms and no evidence of vascular invasion or extrahepatic spread
