

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 87917

Title: Efficacy and safety of aspirin antiplatelet therapy within 48 h of symptom onset in patients with acute stroke

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 06081510

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: Denmark

Author's Country/Territory: China

Manuscript submission date: 2023-09-25

Reviewer chosen by: AI Technique

SPECIFIC COMMENTS TO AUTHORS

In this study, the authors evaluated the efficacy and safety of aspirin antiplatelet therapy within 48 hours in patients with acute stroke. The authors found that aspirin use was associated with favorable functional outcomes but did not significantly reduce the risk of recurrent vascular events. The study is well performed and the results are well discussed. The reviewer recommends to accept this study after a minor editing of the manuscript. Comments: 1. Some minor spelling mistakes should be corrected. 2. Tables should be re-structured. The lines are missing. 3. The references should be updated.
