COMMENTS TO AUTHORS

The manuscript entitled " Nonampullary duodenal adenoma: Current understanding of its diagnosis, pathogenesis, and clinical management" by Chul-Hyun Lim and Young-Seok Cho is a timely and informative article which reviews our current knowledge of nonampullary duodenal adenoma prevalence, natural history and diagnosis. The molecular mechanisms involved in the progression of duodenal adenomas to adenocarcinoma are reviewed as well. The article provides a detailed description of the available treatments for nonampullary duodenal adenoma. The article is well written and the images are of excellent quality. I have only one point for the authors to consider, a list of the abbreviations will help to facilitate the article reading.
