## COMMENTS TO AUTHORS

This review focuses on non-routine complementary examinations to be performed in acute stroke. The manuscript is exhaustive. I have some suggestions: A. "Blood electrolytes: sodium, potassium, calcium and phosphorus" paragraph. The possibility of cerebral induced hyponatremia (PMID: 28110888) or hypernatremia should be addressed. B. "Cholesterol and Triglycerides" paragraph, please refer to more recent guidelines C. Polysomnography paragraph: Please comment on the hemodynamic mechanism associated with a detrimental effect of OSAS in acute stroke (PubMed PMID: 19461025.) D. An English revision is advisable. Please check the text for typos.
