COMMENTS TO AUTHORS

This is a well written review paper concerning the prevalence of H. pylori and its role in increased risk of developing ulcer disease in patients with end-stage renal disease and liver cirrhosis. The authors give the extensive overview about the peculiarities of H. pylori prevalence and its pathogenic role in patients with concomitant diseases like end-stage renal disease and liver cirrhosis. The authors described also the optimal H. pylori eradication regimes in patients with concomitant diseases. The authors have reviewed and analyzed an ample amount of literature (124 references). However, the following point needs to be considered: 1. It would be necessary to mention also the possible role and prevalence of enterohepatic Helicobacter spp. like Helicobacter hepaticus and Helicobacter bilis in patients with concomitant diseases and particularly with liver cirrhosis.

COMMENTS TO AUTHORS

Main comments I think that this is a mix of at least 3 reviews: 1) H.pylori in ESRD 2) H.pylori in cirrhosis 3) updated treatments for H.pylori eradication. It would be better to separate these arguments (at least 1 and 2 from 3). Minor comments I think that a better title should be "Peptic ulcer disease: the role of Helicobacter Pylori infection in ESRD and in cirrhosis". Abstract: please clarify ESRD The authors should specify the aim. The sentence (subtitle)"H. pylori prevalence among those with end-stage renal disease" should be better "H. pylori prevalence among patients with end-stage renal disease" Pag 4; what is a "cutoff ECR"? Pag 10 and pag 11: metaanalysis should be meta-analysis Pag 10: H. pylori infections should be infection Part of the references should be updated (starting from number 1).
