A comparative trial of LINX versus Lap Nissen: caveats for ...

<https://www.sages.org/meetings/annual-meeting/abstracts-archive/a-comparative-trial-of...>

Conclusions: Laparoscopic **magnetic sphincter augmentation** is a safe and effective therapy for GERD. While MSA is easier and faster to perform than LNF, in our initial experience, more post operative **care** was required for MSA **patients**.

Management of patients with faecal incontinence

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4699277>

The authors concluded that with careful **patient selection** and meticulous surgical technique this method may still be considered an option for **patients** with severe FI [Wong et al. 2011b]. The **magnetic** anal **sphincter** consists of a ring of titanium beads with internal **magnetic** cores. It is placed around the EAS.
