SPECIFIC COMMENTS TO AUTHORS

This is a well written case report depicting the clinical course of a patient with malignant pericardial effusion as a consequence of metastatic CRC. It is a very rare occurrence and the number of published cases is small. This may well be the first time that a patient with malignant pericardial effusion as a consequence of metastatic CRC underwent the treatment with fruquintinib. Therefore, I believe that this is a valuable contribution to the field and that it will be of interest to the readers of WJCC.
