

Dear Reviewers,

Thank you for your attention to my manuscript.

As you said, it was a very rare case report. This might be the first time that a patient with malignant pericardial effusion caused by metastatic CRC has been well treated.

We hope physicians can use fruquintinib to treat patients with malignant pericardial effusion caused by metastatic CRC. Fruquintinib may confer good survival, which has important clinical significance. I think it's also what you expect.

Thank you very much!

Yours truly

Ying Zhang
