Manuscript Number	18726
Manuscript Title	<a href="#">Neuroendocrine differentiation: The mysterious fellow of colorectal cancer</a>
Review Time	2015-05-19 00:11

Comments To Authors	This review is very useful from an oncological point of view. Even if it is true that a neuroendocrine component is frequent in the CRCs, both the pathologist and the oncologist do not know what is its value and if a therapy similarly to that utilized for neuroendocrine tumors could be efficacious. Reading the paper will stimulate to consider with more attention this fascinating argument.
Classification	<div><input type="radio"/> Grade A (Excellent)</div> <div><input checked="" type="radio"/> Grade B (Very good)</div> <div><input type="radio"/> Grade C (Good)</div> <div><input type="radio"/> Grade D (Fair)</div> <div><input type="radio"/> Grade E (Poor)</div>
Language evaluation	<div><input checked="" type="radio"/> Grade A: priority publishing</div> <div><input type="radio"/> Grade B: minor language polishing</div> <div><input type="radio"/> Grade C: a great deal of language polishing</div> <div><input type="radio"/> Grade D: rejected</div>
Conclusion	<div><input checked="" type="radio"/> Accept</div> <div><input type="radio"/> High priority for publication</div> <div><input type="radio"/> Rejection</div> <div><input type="radio"/> Minor revision</div> <div><input type="radio"/> Major revision</div>
