

Name of journal: World Journal of Orthopedics

ESPS Manuscript NO: 21098

Reviewer 1:

It would be useful to have a more structured timeline to reflect the title of the paper i.e. demonstrate in a diagram/chart what has changed (not too much actually). Visual aids are required I would suggest at least an ultrasound scan with measurement techniques demonstrated and AP radiographs demonstrating DDH and some of the osteotomies.

Answer:

Thank you for your comments and suggestions. We added a chart to summarize the recent changes in the field of DDH (figure 6). We also added some visual aids including an MRI scan, an AP radiograph demonstrating DDH and several additional radiographs demonstrating Salter, DEGA and Ganz osteotomies (figures 1-5).

Reviewer 2:

The review on the current practices for detection/ treatment of Developmental dysplasia of the hip (DDH) and its screening/treatment updates is well written. This paper give extensive information and review on the clinical procedures of DDH. The authors can explain the procedures with relevant images/ photographs. Over all the paper adds information to the field of DDH.

Answer:

Thank you for your comments and suggestions. We added some visual aids to better explain some of the procedures (figure 3-5).
