SPECIFIC COMMENTS TO AUTHORS

The article is within the scope of the journal, and deals with an interesting topic. It is well written and organized. The reading is fluent. An original and novel case review is presented. The results are described and a discussion is carried out. To be accepted, some changes would have to be made: a) A section on the state of the art should be included where the work presented is compared with other similar ones, delimiting the advances and limitations. b) A state of the art section should be included. c) The conclusions must summarize the scientific contribution of the article and what would be the main lines of future work.

SPECIFIC COMMENTS TO AUTHORS

The Authors document a case of successfully resolved gastric perforation complicated by pancreatic WON. While the case presents no particular novelty, it may have a good educational value. I have however some major concerns: - Authors contributions: which study? this is a case report! please revised this - Discussion: 'We performed a retrospective review at a single center experience. A prospective, randomized, multicenter investigations related to this issue are necessary.'. Again, this is a case report. How do the Authors imagine to conduct a prospective, randomized, multicenter investigation on gastric perforation due to WON? I am afraid that the Authors have copied the above statements from other sources without thinking about them. All references date back to more than 10 years ago. I therefore encourage the Authors to carefully reconsider what they have written.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting case report, because of the gastric perforation induced bei WON in necrotizing pancreatitis. The authors have selected nice CT images to demonstrate the case. Language should be revised and the literature should be updated. Especially: The key words should contain: case report peritoneal irrigation should be changed in peritoneal irritation biochemistry test: list in a table instead of text with the normal values at their side necresectomy, should be changed to necrosectomy The mortality rates are much higher then 20-30% in severe pancreatitis. This should be corrected. Also the authors should find newer literature (than 2007) Take out : We performed a retrospective review at a single center experience. A prospective, randomized, multicenter investigations related to this issue are necessary. No case report in the literature (number 4) Literature is very old (number 9) It is wrong that endoscopic drainage leads to longer hospital stay. This should be corrected. Comment on life style changes for the patient.
