Tofacitinib in the treatment of ulcerative colitis ...

<https://journals.sagepub.com/doi/epub/10.1177/1756284819848631>

Tofacitinib is an oral small molecule directed against the JAK/STAT pathway, blocking the inflammatory cascade. Oral formulation of tofacitinib has recently been approved for the treatment of patients with moderate–severe ulcerative colitis. Its efficacy and safety have been demonstrated in three phase III clinical trials and confirmed by promising real-life data.

Tofacitinib for the treatment of ulcerative colitis ...

<https://www.tandfonline.com/doi/abs/10.1080/1744666X.2018.1532291>

Expert commentary: Tofacitinib will be the first drug on the class of JAK inhibitors to be available for treatment of ulcerative colitis. The efficacy of the drug, with a rapid onset of action even in cases of severe colitis, oral administration, and possibility to use the drug intermittently without generating immunogenicity, will bring about a redesign of current treatment paradigms for ulcerative colitis.

Tofacitinib for the Treatment of Ulcerative Colitis

Jessica Rosenberg MD, Joshua M. Steinberg MD, Mark C. Mattar MD

Abstract: Ulcerative colitis (UC) is a chronic immune-mediated inflammatory condition affecting the colon. Recently, tofacitinib, an oral small molecule that is an inhibitor of the Janus kinase (JAK) signal transduction pathway, was proven efficacious for inducing and maintaining remission in adult patients with moderate to severe UC in three global Phase III studies. The purpose of this review is to summarize existing data on the efficacy, safety, and quality of life issues related to use tofacitinib as well as highlight recent real-world experience with this drug among patients with ulcerative colitis.

INTRODUCTION

Ulcerative colitis (UC) is a chronic inflammatory condition that primarily affects the colon,

[PDF] Tofacitinib for induction of remission in ulcerative ...

www.annalsgastro.gr/files/journals/1/earlyview/2018/ev-05-2018-07-AG3986-0276.pdf

Conclusion In patients with moderate-to-severe ulcerative colitis, short-term treatment with tofacitinib is effective for induction of remission and improvement of quality of life. Keywords Tofacitinib, ulcerative colitis, meta-analysis

Promising biological therapies for ulcerative colitis: A ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4644886>

Nov 15, 2015 - Core tip: Ulcerative colitis (UC) is a chronic lifelong condition characterized by alternating flare-ups and remission. Current treatment modalities for UC include 5-aminosalicylates, corticosteroids, immunosuppressants (e.g., cyclosporine, tacrolimus), and surgery. Medical treatment aims to induce remission and prevent relapse of disease activity.
