Apr 01, 2017 · To clarify this issue, we retrospectively reviewed patients with preoperative or postoperative **radial nerve** palsy related to a **humeral shaft fracture**. The dual objective was to identify predictors of non-recovery of the **radial nerve** palsy and to assess the usefulness of **radial nerve exploration** in patients with preoperative palsy.

Apr 13, 2020 · The **recovery** rate of **primary RNP** in operatively treated **humeral shaft fractures** was 95%. 62 out of 65 **primary RNPs** showed full **recovery without** reintervention. In 41 of these 65, the **radial nerve** was explored during surgery, of which 40 (98%) showed full **recovery**.

Abstract

Background

Case Report

Discussion

Conclusion

Background:Intramedullary nail gains increasing popularity as an option to treat **fractures** of the **humeral shaft**. The proximity of the **radial nerve** to the **fracture** site is always a concern for iatrogenic nerve damage during **nailing**. However, there is no documented report of direct **radial nerve** palsy due to **nailing** process. Case report:A forty-two years old man was involved in a road traffic accident and he sustained a **close fracture** of his left humeral diaphysis and a **close fracture** of the diaphysis of his ips...
