COMMENTS TO AUTHORS

Concerns: The article is interesting, however a kind of long for a case report. The manuscript could be shortening in 20%. In the discussion section the authors should confront their finds and result with other reports that have described post-gastric bypass surgery encephalopathy as a result of secondary nutrient deficiencies or unmasked urea cycle disorders. There are syntax and grammar errors in the manuscript.

COMMENTS TO AUTHORS

This is an excellent case report. In my opinion, adding more details about your treatment process of this patient and making a summary of other case reports will make your work perfect.
