the results. Tables: All 4 Tables are showing clearly making and adequate support of the results. Biostatistics: This work met the requirements of biostatistics. References: Authors cited properly actualized references of high interest for their propose in introduction and discussion. Organization of the study: It was properly organized Research method reporting. Comments to the author: In this manuscript authors study the effect of the emergency department nursing intervention on the continuity of care, self-care and psychological symptoms. The author could make a graph of correlation between every two or more parameters.

Thank you for your thorough review and positive feedback on the manuscript titled "Impact of emergency department nursing intervention on continuity of care, self-care, and psychological symptoms." We appreciate your comments on various aspects of the manuscript.

1.Authorship and Institutions: We have ensured that the authorship and institutional affiliations are correct and accurately reflected in the manuscript.

2.Authors' Contribution: We apologize for the missing content in the Authors' Contribution section. In the revised manuscript, we will include a detailed section specifying the contributions of each author to the study.

3.Abstract and Keywords: We are glad that you found the abstract well-structured and the keywords reflective of the study's content. We will ensure that the required format is maintained and that the keywords accurately represent the study.

4.Background: We appreciate your recognition of the importance of nursing interventions in the emergency department and their impact on continuity of care, self-care abilities, and psychological symptoms. We will maintain the focus on the holistic comfort care model and its relevance to patient rehabilitation.

**SPECIFIC COMMENTS TO AUTHORS**

The manuscript entitled " Impact of emergency department nursing intervention on continuity of care, self-care and psychological symptoms" is well designed and written. The introduction gives a good overview about the topic and the procedures are precisely described. The results were well discussed. However, some issues have to be addressed:

1. The tables are relevant and informative. However, it is suggested that the correlation between each table should be analyzed and discussed more clearly.
2. Editing and proofreading are needed to maintain the best sense of reading.

Thank you for your review of the manuscript titled "Impact of emergency department nursing intervention on continuity of care, self-care, and psychological symptoms." We appreciate your positive comments regarding the design and writing of the manuscript, as well as the precision in describing the procedures and the quality of the discussion.

1. Correlation Analysis: We acknowledge your suggestion to analyze and discuss the correlation between each table more clearly. In the revised manuscript, we will conduct

a thorough correlation analysis and provide a more detailed discussion of the relationships between the variables presented in the tables. This will enhance the understanding of the data and their interplay.

2.Editing and Proofreading: We appreciate your feedback regarding the need for editing and proofreading. In the revised manuscript, we will carefully review the text to ensure optimal readability, clarity, and coherence. We will address any grammatical or typographical errors to maintain the highest standard of writing.

Thank you for your valuable comments, and we will incorporate these suggestions into the revised manuscript to improve its quality and readability.
