Clinical role of non-invasive assessment of portal hypertension

Bolognesi M *et al.* Non-invasive assessment of portal hypertension

Massimo Bolognesi, Marco Di Pascoli, David Sacerdoti

Abstract

Measurement of portal pressure is pivotal in the evaluation of patients with liver cirrhosis. The measurement of the hepatic venous pressure gradient represents the reference method by which portal pressure is estimated. However, it is an invasive procedure that requires significant hospital resources, including experienced staff, and is associated with considerable cost. Non-invasive methods that can be reliably used to estimate the presence and the degree of portal hypertension are urgently needed in clinical practice. Biochemical
