**Conclusion:** Minor revision

**Specific Comments to Authors:** The article with the title "Sepsis one-hour bundle management combined with psychological intervention on negative emotion and sleep quality in patients with sepsis" is in generally well done. Title: Appropriate. It reflects the main content of the research. Authorship: Is correct. Institutions: are correct. Authors contribution is correct. Abstract: Is a structured abstract according to the required format. In 326 words authors showed a summary of the content of the manuscript. Key words: 6 that reflect the content of the study. Core Tip: In 92 words author reflect properly aspects that should call attention to the readers. Background: It is a retrospective study with a high importance for the clinical practice. Psychological interventions have considerable impact on the mood, sleep, and quality of life of critically ill patients. Method: Authors made the detailed description of the investigations. Results: This study showed that the Hamilton Anxiety scale, Hamilton Depression scale, and Pittsburgh Sleep Quality Index scores of the patients were significantly lower after the intervention, and the Post Traumatic Growth Inventory scores were higher than those before the intervention. Discussion: Authors made a detailed an informative discussion of the results. Illustrations: They show 3 figures and 4 tables with their corresponding legend. All figures and tables are showing clearly making and adequate support of the results. Biostatistics: This work met the requirements of biostatistics. References: Authors cited properly actualized references of high interest for their propose in introduction and discussion Organization of the study: It was properly organized Research method reporting. As a retrospective study it has been reported according with the corresponding guidelines. Comments to the author: In this manuscript authors investigated changes in negative emotions, quality of life, and prognosis of patients with sepsis after H1B management and psychological intervention. This may provide a reference for nursing management and treatment strategies for patients with sepsis.

*Response : Thank you for your valuable comments.*

**Science editor:**

1 Conflict of interest statement: Academic Editor has no conflict of interest. 2 Manuscript's theme: The topic is within the scope of the journal. 3 Academic misconduct: No academic misconduct was found. 4 Scientific quality and comments: This study aims to investigate the effects of sepsis, a one-hour bundle management was combined with psychological intervention in patients with sepsis. The study design is appropriate and feasible. The statistical methods used are correct. The labeling of P value in the figures does not meet the requirements of WJG, please don't include any \*, #, †, §, ‡, ¥, @....in your manuscript; Please use superscript numbers for illustration; and

for statistical significance, please use superscript letters. Statistical significance is expressed as aP <0.05, bP <0.01 (P > 0.05 usually does not need to be denoted). If there are other series of P values, cP <0.05 and dP <0.01 are used, and a third series of P values is expressed as eP <0.05 and fP <0.01. 5

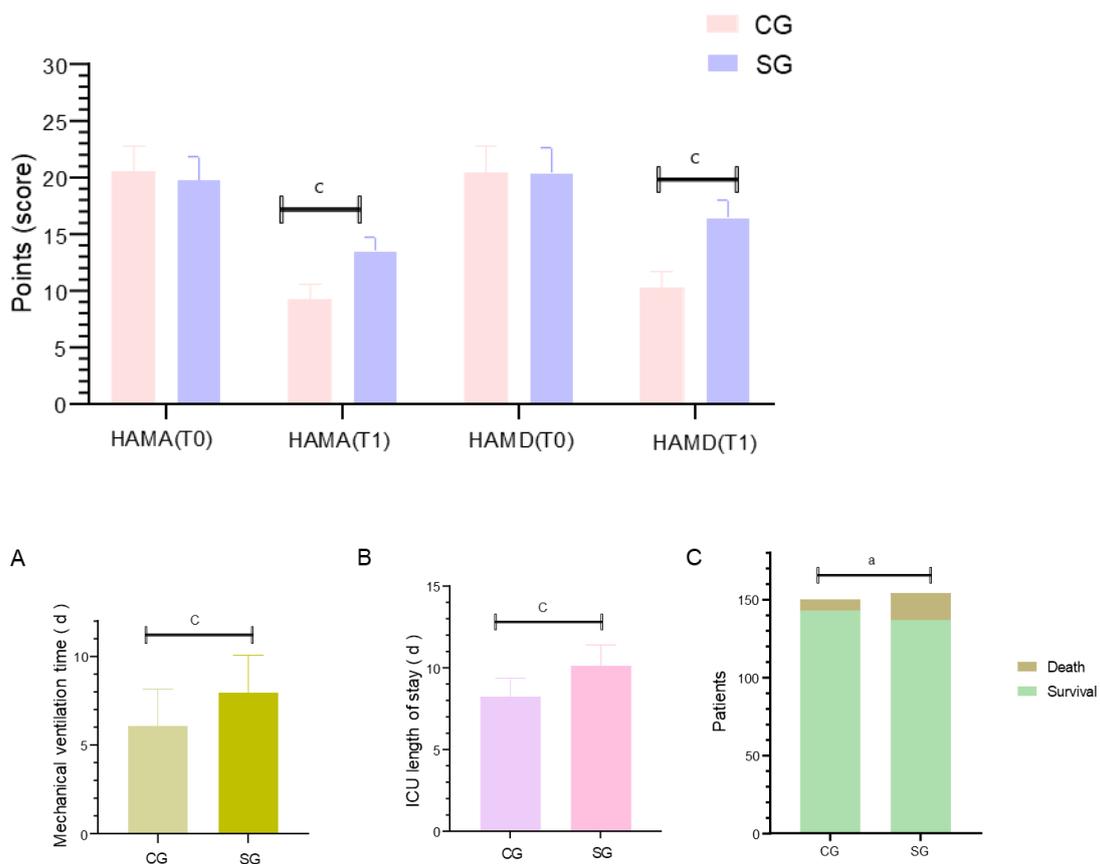

Language evaluation: Further language polishing is required in order to meet the publication requirement (Grade A). 6 Recommendation: Conditional acceptance.

Language Quality: Grade B (Minor language polishing)

Scientific Quality: Grade C (Good)

*Reply : Thank you for your valuable comments, we have made changes to the picture in the text.*

*Specific as follows :*

PS: aP < 0.05, cP < 0.001.
