COMMENTS TO AUTHORS

The authors reviewed the recent clinical data on VEGF and EGFR targeting regimens in metastatic colorectal cancer (CRC) and their own experimental studies regarding the anti-proliferative action of antagonists of BN/GRP and GHRH, and cytotoxic analogs of Somatostatin and LHRH against CRC. This manuscript is well summarized with topics. However, a few points need to be modified. 1. If the authors want to emphasize the use of cytotoxic LHRH analogs for future human trials against CRC, it would be better to describe the percentage of CRC that overexpresses LHRH receptors in advanced CRC in the text. 2. The information of LHRH receptor gene mutation in CRC is not described in the text. If available, this point should be added to the text.
