< ojected Timetable and Fun... Health and Economic Outcomes **Conclusion** >

The metabolic liver diseases account for a substantial number of pediatric cases of complicated and severe liver disease and a substantial number of children who require liver transplantation. In recent years, the availability of recombinant DNA technology, the development of transgenic and knockout

[https://link.springer.com/chapter/10.1007/978-3-642-76802-6\\_27](https://link.springer.com/chapter/10.1007/978-3-642-76802-6_27) ▾

Many highlight the liver's key role in **metabolism** [1] while glycogen storage **diseases** and **disorders** of fat oxidation highlight its capacity to provide energy required by other tissues. Numerically important **metabolic disorders** such as  $\alpha$  1 -antitrypsin deficiency and Wilson's **disease** are considered elsewhere (see Chaps. 25 and 23).
