Current Therapy of Pediatric Crohn's Disease

Avishay Lahad, Batia W-194

Abstract

Inflammatory bowel diseases (IBD), including Crohn's disease (CD) and Ulcerative colitis (UC), are chronic relapsing and remitting diseases of the bowel, with an unknown etiology and appear to involve interaction between genetic susceptibility, environmental factors and the immune system. Although our knowledge and understanding of the pathogenesis and causes of inflammatory bowel diseases have improved significantly, the incidence in the pediatric population is still rising. In the last decade, more drugs and treatment options have become available including 5-
