COMMENTS TO AUTHORS

The authors review the recent status of CD treatment, especially in pediatrics. The present paper was well investigated and will give us an important clinical information. I have no claim in the present paper.

COMMENTS TO AUTHORS

The present paper "Current therapy of pediatric Crohn's Disease" gives a panorama on main medical and nutritional therapies addressed for pediatric Crohn's Disease (CD). The topic is well explored, since numerous papers have already been published on the field, so the necessity for another one is questionable. Since the explored topic is extremely vast, a good opportunity to improve the quality of the article would be to focus on a single aspect of CD therapy, such as nutritional therapy or anti-TNF alpha agents. The attempt to list all the possible therapies in a comprehensive way, in fact, could make the article too long and boring for the reader. On the other hand, an article describing the treatments in a summary manner is likely to become inaccurate and vague. A table comparing the dose, indications and therapeutic outcomes of single current treatments could make the article more interesting. Finally, the abstract is lacking.

COMMENTS TO AUTHORS

A good review about the treatment of CD. However, the authors could comment the recent works related to the pathogenesis of CD. Andreu-Ballester JC, et al. Deficit of Gammadelta T Lymphocytes in the Peripheral Blood of Patients with Crohn's Disease. Dig Dis Sci. 2011; 56:2613-22. Andreu-Ballester JC et al. Microsporidia and its relation to Crohn's disease. A retrospective study. PLoS One. 2013; 8:e62107. A immunodeficiency that could be related to opportunistic germs and their relationship to future antibiotic therapy..

COMMENTS TO AUTHORS

To: Lian-Sheng Ma President and Company Editor-in-Chief World Journal of Gastrointestinal Pathophysiology Title: "Current Therapy of Pediatric Crohn's Disease" Dear Editor, We have read through the manuscript and we think that this is a good and well-written paper. I think that it could improve by pointing out the role of IBD on vascular walls and the possible role of "vascular" therapies in IBD patients. The authors can cite and comments the following paper: Ciccone MM et al. J Cardiovasc Med (Hagerstown). 2014 Jul 16. [Epub ahead of print] and Principi M et al. J Crohns Colitis. 2013 Nov 1;7(10):e427-33.
