### COMMENTS TO AUTHORS

An exhaustive work. Despite the matters are blurred, the discussion is meticulous and convincing. Perhaps the authors could have the text seen by a native English-speaking MD, to render the style more compact and efficacious.

### COMMENTS TO AUTHORS

Very good mini-review, well written. In THERAPEUTIC ANALOGIES section the authors could add data with Ustekinumab (a biologic that selectively targets IL-12 and IL-23) use in HS.

### COMMENTS TO AUTHORS

The article is well written and well supported by large number of references. My only recommendation for the sake of those readers of the journal who are general gastroenterologists rather than IBDOLOGISTS, if authors would consider a recommendation that such practicing gastroenterologists make a habit or routine to ask for and if needed do a local examination since, if diagnosis made or picked up earlier is so much easier to treat otherwise carries a lot of morbidity and requirement of potent potentially toxic drugs. Other than the manuscript is fine for publication. I leave this to the discretion of the editor and authors
