COMMENTS TO AUTHORS

1. The mt-sDNA CRC screening seems to be helpful only for colorectal cancer average-risk population. Please define the average-risk population explicitly and specify this at the earlier part of the manuscript. 2. It would be more informative if the authors can describe the age and gender-stratified incidence rates of colorectal cancer in the general population. 3. There are a few typos, for example, the last two sentences of the second paragraph on page 8.

COMMENTS TO AUTHORS

This is a partially well-written paper containing interesting results which merit publication. For the benefit of the reader, however, a number of points need clarifying and certain statements require further justification. Also, a revision of some minor syntax errors should be performed. At this point, the manuscript should be accepted through provided certain changes for publication in the Journal.
