Wei Chen, Xiao-Nan Zhu, Jin Wang, Lin-Lin Zhu, Tao Gan, Jin-Lin Yang

## Abstract

### BACKGROUND

Adverse events during endoscopic submucosal dissection (ESD) of superficial esophageal neoplasms, such as perforation and bleeding <sup>1</sup> have been well documented. However, the Mallory-Weiss Tear (MWT) during esophageal ESD remains under investigation.

### AIM

To investigate the incidence and risk factors of the MWT during esophageal ESD.
