A case of gastritis cystica profunda in a previously unoperated stomach

Xiong-Fei Yu, Li-Wen Guo, Shi-Tu Cheng, Li-Song Teng

Abstract

Gastritis cystica profunda is a relatively rare disease, usually observed at anastomotic sites in stomachs of patients that have undergone gastric procedures. We present the rare case of an elevated lesion in the anterior wall of the gastric antrum of a 43-year-old Chinese woman who had never undergone gastric surgery
