COMMENTS TO AUTHORS

This is an interesting case report. A few comments: 1. In figure 2, did you mean to write "hyperechoic"? (the lesion appears bright on eus) 2. Please provide more details on the technique: knife type, cautery settings, ?submucosal injection material (there appears to be some injection on the photos), and a brief explanation on how to distinguish unusual lesions from muscularis propria when making an incision

COMMENTS TO AUTHORS

Thank you for your manuscript about endoscopic cuttin biopsy technique. In generally this is interesting and well written manuscript. However it needs some minor modifications. 1. Please use all abbreviations at firs used area. 2. In figure legends 3, "Un-enhanced and intravenous contrast-enhanced computed tomography scans of the abdomen show a slightly hyperdense mass in the rectal wall without contract enhancement (white arrow)."could be more appropriate.
