COMMENTS TO AUTHORS

The author comprehensively reviewed hypertension in children with chronic kidney disease (CKD). The paper is well-written and provides contemporary information regarding this aspect. Two points may be revised. 1. Pathophysiology: The author described medications like NSAID, erythropoietin, cyclosporine, tacrolimus and corticosteroid could predispose to or make hypertension worse in children with CKD. Please provide a brief explanation how these drugs affect blood pressure. 2. page 12, line 5: What is "SHPT"? Secondary hyperparathyroidism? Please spell-out full terms at first before use an abbreviation.
