Role of *Helicobacter pylori* infection in gastric carcinogenesis: Current knowledge and future directions

Aleksandra Sokic-Milutinovic, Tamara Alempijevic, Tomica Milosavljevic

Abstract

Helicobacter pylori (*H. pylori*) plays a role in the pathogenesis of gastric cancer. The outcome of the infection depends on environmental factors and bacterial and host characteristics. Gastric carcinogenesis is a multistep process that is reversible in the early phase of mucosal damage, but the exact point of no return has not been identified. Therefore, two main therapeutic strategies could reduce gastric cancer
