COMMENTS TO AUTHORS

Authors had described a role of Helicobacter pylori infection in the pathogenesis of gastric cancer (GC). They presented factors involved in the GC pathogenesis, including environmental, bacterial and host factors as well as eradication of bacteria and possible preventive methods using vaccination. They presented current methods of eradication, indicating the growing problem of resistance to antibiotics, and possible development of vaccine against H. pylori. The eradication of H. pylori is a known strategy used in order to reduce bacteria-related GC risk and its consequences. Authors pointed out the need of further efforts in development of effective vaccine and new antibacterial agents as well as the need of improvement of patient's compliance during eradication.

COMMENTS TO AUTHORS

1) The authors should revise the manuscript for minor language errors. 2) The abbreviations should be given at the first time they are available.
