COMMENTS TO AUTHORS

I was asked to review the paper entitled "A HISTORY OF THE INFANTILE HEPATIC HEMANGIOMA: FROM IMAGING TO GENERATING A DIFFERENTIAL DIAGNOSIS" I think that it is an interesting paper, well writtem t Minor English Language polishing is needed. Also, please explain abbreviations when first used:Page 4, 4th paragraph: "Screening for liver IH by USG is recommended" What is USG? Page 8, first paragraph: "They often present with astallate central flow void on T2 spin echo sequences" What is "astallate"? Figure 2- The legend says"Figure 2. Multiple IHHs. Axial T2 weighted MRI image of 2 month-old boy with hepatoblastoma showing scattered areas and portal vein thrombosis". Which is it IHH or hepatoblastoma?

COMMENTS TO AUTHORS

There are several reviews looking at the presentation, diagnosis and management of infantile hepatic hemangiomas (IHH). The authors collected considerable data to support their conclusions and proposed some interesting directions. It would bring pleasure to readers of World Journal of Clinical Pediatrics. I have several suggestions for improvement. Comments: 1. In Clinical Presentation-Diffuse Lesion, the authors stated that diffuse lesions are frequently associated with high cardiac output. However, these patients are more likely to have a low cardiac output due to hypothyroidism. 2. There are some grammar errors or wrong words/phrasing in the manuscript. For instance: Introduction: 'over a 6-10 year period' should be 'over a 6-10 years period'. Treatment: 'patients may presents with' should be 'patients may present with'.
