## COMMENTS TO AUTHORS

The authors reported a rare case of oxyntic gland adenoma endoscopically mimicking gastric neuroendocrine tumor successfully removed by endoscopic mucosal resection. This case is a rare interesting case. But I have some comments and questions. #1. The authors reported that this case mimicked neuroendocrine tumor. So, the authors performed special staining on the tissue related to neuroendocrine tumor such as synaptophysine, chromogranin, glimelius, NCAM, and NSE. #2. The authors should investigate the expression of AFP protein on the tissue, immunohistochemically. #3 The authors reported negative for MUC2, MUC5AC with a low Ki-67 proliferative index. The author should show these results of immunohistochemical analysis as figures on this article. #4. The authors summarized past reported oxyntic gland polyp/adenoma cases in one table. #5 Is there any relationship between H.pylori infection and oxyntic gland adenoma?

## COMMENTS TO AUTHORS

This manuscript is a report of relative rare case and the manuscript can be published with minor revision.

1. The key words should be redesigned to emphasize the core content of the manuscript.
2. Pathological diagnose should be noted in the last paragraph of the case report part.
