## Segmental small bowel necrosis associated with antiphospholipid syndrome: A case report

Qun-Ying Wang, Xiao-Hua Ye, Jin Ding, Xiao-Kang Wu

### Abstract

Antiphospholipid syndrome is a multi-system disease characterized by the formation of thromboembolic complications and/or pregnancy morbidity, and with persistently increased titers of antiphospholipid antibodies. We report the case of a 50-year-old, previously healthy man who presented with fever and new-onset, dull abdominal pain. A contrast-enhanced computed tomography scan showed segmental small bowel obstruction, for which an emergency laparotomy was
