

Response letter

Dear editor:

We are pleased to send you our paper “Pancreatic adenosquamous carcinoma and in a CDKN2A germline mutation carrier “. The paper has been considered for publication previously in the World Journal of Gastroenterology (Manuscript NO: 31861), but was rejected. However, due to the interesting topical scope, the director found it suitable for publication in the World Journal of Gastrointestinal Oncology. The reviewer comments that, although the association between pancreatic cancer and FAMM is well known, the report of this rare variant arising in an intraductal papillary mucinous neoplasm may increase our knowledge in pancreatic carcinoma. Nevertheless, some misspellings required “minor language polishing” .

Thus, an English native speaker thoroughly reviewed and corrected the article. Enclosed you will find the updated version, with changes highlighted in red. We hope you find it suitable for publication in your journal.

Fernando Martínez de Juan, MD,

Gastroenterology and Digestive Endoscopy Department,

Valencian Institute of Oncology
