COMMENTS TO AUTHORS

The title "pseudofracture in vitamin D deficiency" may be misleading since the content of the manuscript is all about neuropathic arthropathy of the shoulder. I would suggest changing to a more appropriate title. The details regarding vitamin D deficiency and pseudofracture from osteomalacia should be discussed further, for example, does vitamin D level of 12 ng/mL can seriously cause osteomalacia? What are the symptoms associated with osteomalacia that are the same or different from neuropathic arthropathy. The authors should also explain the difference between x-ray abnormalities in pseudofracture from osteomalacia and neuropathic arthropathy.
