#### **SPECIFIC COMMENTS TO AUTHORS**

interesting subject and nice work. The text has typo and editing errors. Requires editing.

A research strategy of this review would be useful

#### **SPECIFIC COMMENTS TO AUTHORS**

Very useful review concerning a topic of extreme interest. IgG4 syndrome is a fascinating disease with proteiform manifestation. A clarification about autoimmune pancreatitis and recent acquired informations about physiopathology, diagnosis and treatment are useful for experts and non experts. I appreciated the novelty of checkpoint inhibitors related pancreatitis. I suggest to supply some imaging (CT scan/MRI) and histopathology to create more interest and make the paper less boring. The figure 1 is influent. Because of the authors refers to ANCA associated vasculitides but also to SLE, instead of vasculitis I would prefer vasculitis and connective tissue diseases related.
