SPECIFIC COMMENTS TO AUTHORS

The manuscript was reviewed for publication in the journal. The manuscript was written for showing a review of congenital vascular anomalies associated with hepatic shunts. It is the reviewer's opinion that the review is quite interesting and that the manuscript is easy to follow for the readers in the journal. However, it appears that there are a couple of concerns in the manuscript. 1) It is better that the authors more clearly describe how to show better understanding of congenital vascular anomalies associated with hepatic shunts in the manuscript. 2) It is better to show the images of classification in hereditary hemorrhagic telangiectasia, multiple vascular hemangioma, and hepatic hemangioma in the manuscript. 3) It appears to become curious how to use `however` such as 1) ; however, 2) , however, 3) , however (no comma) and 4) (no comma) however (no comma).

SPECIFIC COMMENTS TO AUTHORS

The manuscript was re-reviewed for publication in the journal. The manuscript was

written for showing a review of congenital vascular anomalies associated with hepatic shunts. It is the reviewer's opinion that the review is quite interesting and that the manuscript is easy to follow. The authors promptly revised or further discussed the issues that the reviewer suggested. I have no more concern in the manuscript. However, the authors should show the changes written in red in the revised manuscript.
