COMMENTS TO AUTHORS

This is a good research, the topic of the paper is interesting and important although there are a few mistakes in table1, why the total number of patients in pT Status are 141, and in pN Status are 141, but the total number of patients in pM Status is 144, in the stage are 144 again.

COMMENTS TO AUTHORS

The Manuscript is interesting and well designed. I suggest these revisions: 1. The treatment options in these cohort of patients have not been reported. We would like to know if they received chemotherapy and the type of chemotherapeutic regimens and surgery. 2. The association of OS with type of treatment regimens should be considered. The correlation of CHI3L1 with treatment options and OS then should be evaluated. 3. English language should be improved.
