Hepatitis B virus and hepatitis C virus infection in healthcare workers

Coppola Nicola, De Pascalis Stefania, Onorato Lorenzo, Calò Federica, Sagnelli Caterina,
Sagnelli Evangelista

Abstract

Approximately 3 million healthcare workers per year receive an injury with an occupational instrument, with around 2,000,000 exposures to hepatitis B virus (HBV) and 1,000,000 to hepatitis C virus (HCV). Although an effective HBV vaccine has been available since the early eighties, and despite the worldwide application of universal vaccination programs started in the early nineties, HBV still remains a prominent agent of morbidity and mortality. There is no vaccine to limit the diffusion of HCV infection, which progresses
