

Responses to reviewers

Reviewer 1

Structure of LAT1 as a representative for LATs is indicated as a new figure.

Reviewer 2

Major comments:

1. JPH203 is currently under the phase I clinical trial. We described that in revised text. However, we were not able to obtain the information regarding cancer types examined.
2. We described the role of LAT3 in cancer to the best of our knowledge. However, since the research progress regarding LAT3 is far less than LAT1, it resulted in a smaller fraction.
3. The title of table was changed.
4. We prepared a simple figure about LAT1 expression and its expected downstream.

Minor comments

1. We described abbreviations in revised text.
- 2, 3. We corrected the spells.

Reviewer 3

Another reviewer also pointed this out and recommended us to add more detailed explanation about LAT3 without changing the manuscript title, and we accepted that proposal. Although the content regarding LAT3 in the revised text is still a smaller fraction of the manuscript, it is because of a few studies of LAT3, and it is hoped that our additional description makes this title optimal.
