### COMMENTS TO AUTHORS

Thanks for the opportunity to review this work. Overall, the major issue of this manuscript is that systematic review is only done on capsule release of the frozen shoulder. Although authors claim that therapeutic options are under systematic review, selected studies from treatment option (except capsule release) are more likely based on authors' preference. I suggest authors can focus on capsule release for frozen shoulder and exclude opinions for the other treatment options.

### COMMENTS TO AUTHORS

Thank you for your efforts. A well written literature summary. Only recommendation is that, there is no table leged for the table one. with that addition manuscript will be an informative literature review.

### COMMENTS TO AUTHORS

Authors did a good job reviewing therapeutic options of frozen shoulder. The systematic review method with inclusion and exclusion criteria should appear early in the article. There are some minor typos that need to be fixed. In the biomechanics of frozen shoulder section, "...produces restriction of external rotation in adduction..." should "in adduction" be "in the adducted shoulder"; "...produces restriction of external rotation in abduction..." should "in abduction" be "in the abducted shoulder"?
