Hepatitis B virus subgenotype F3 reactivation with vaccine escape mutations: A case report and review of the literature

Stefan Schlabe, Kathrin van Bremen, Souhaib Aldabbagh, Dieter Glebe, Corinna M Bremer, Tobias Marsen, Walter Mellin, Veronica Di Cristanziano, Anna M Eis-Hübinger, Ulrich Spengler

Abstract

Hepatitis B represents a global health threat because its chronic course and sequelae contribute to a high morbidity and mortality. HBV infection can be controlled by vaccines, antiviral treatment, and by interrupting transmission. Rare vaccine escape mutants are serious because they eliminate vaccine protection. Here, we present a 74-year-old
