**SPECIFIC COMMENTS TO AUTHORS**

The manuscript entitled “Intraperitoneal Rupture of the Hydatid Cyst: Four Case Report and Literature Review” is well presented. In this study, the authors have presented four cases of spontaneous rupture of cyst hydatid in patients aged between 27 and 44. Three

of the perforated cysts were in liver and the other one was located in spleen. These cases were successfully treated by albendazole after surgical intervention. This is an informative and valuable study. As intraperitoneal hydatid cyst rupture is a life threatening complication and is often misdiagnosed, this study is very useful to both clinicians and patients. I have no specific comments to the authors, only some minor language polishing should be checked.
