Title of Study: Quest for the best Endoscopic Imaging Modality for Computer-assisted Colonic Polyp Staging

Because of the present data and the implemented experiments statistical tests were not possible. So the only statistical measures that could be employed in the study were basic performance measures like accuracy, sensitivity, specificity, positive predictive value (PPV) and negative predictive value (NPV). These performance measures were computed by statistical experts with master degrees in mathematics (Georg Wimmer and Andreas Uhl).

Sincerly,

Georg Wimmer, Department of Computer Sciences, University of Salzburg, Jakob-Haringerstrasse 2, 5020 Salzburg, Austria, Email: gwimmer@cosy.sbg.ac.at
