COMMENTS

COMMENTS TO AUTHORS:
Authors summarized and reviewed HBV-associated miRNAs quite nicely. This review will give us the whole picture of HBV-related miRNAs and the benefit of miRNAs as well, not only as biomarkers for diagnosis, but also for prognosis as well as for future threatment of HBV-associated liver diseases. Overall, the manuscript is well written and organized, however some points have to be revised: 1. Since this review is miRNA on HBV-related diseases, it is better to focus on miRNA related with HBV only. Some well known information can be removed. For instance, section "Biogenesis and action mechanism of miRNA" is not necessary. 2. In order to make this review to be more informative, please try to make illustration (figures) to explain the sentences. 3. English has to be improved.
