SPECIFIC COMMENTS TO AUTHORS

The review provides a reasonable summary of the relationship between myasthenia gravis and pregnancy. Obviously, the authors already did an excellent work , but still have some problems in detail which I have to propose. Which confuse me a lot is that in the part of “MG DEVELOPMENT IN PREGNANCY”, most of the content is about “the diagnosis of MG”. Maybe more words associated with the development of MG during pregnancy will be benefit. Otherwise, the part of “MG DEVELOPMENT IN PREGNANCY” and “EFFECTS OF PREGNANCY ON MG” seem can be merged, because of their common direction of discussion. In addition, too many papers were cited to clarify a same opinion, which may make readers can’t get enough and reliable information from this manuscript. The last one problem I want to mention is that the part of “CONCLUSION” is a little bit thin. The most important content of a review- the author's personal summary and outlook is missing. Hope the authors can revise their manuscript better and look forward to seeing their work published.
