

Point-to-point responses to the reviewers

Reviewer code: 02942902, and 02446627

First decision: 2017-05-08

Scientific editor: Fang-Fang Ji

1) Reviewer comment

Reviewer Name: Anonymous # 02446627
Review Time: 2017-04-04 18:34
Comments To Authors: Authors have done a good job in addressing this important clinical issue
Classification: Grade C (Good)
Language Evaluation: Grade B: minor language polishing
Conclusion: Accept

Author response:

We thank the reviewer for the positive conclusion as “Accept”.

2) Reviewer comment

Reviewer Name: Anonymous # 02942902

Review Time: 2017-04-22 17:25
Comments To Authors: This paper seems to be a revised paper with responses to the previous reviewing process. NAFLD is less frequently focused in non-obese patients than in patients with obesity, and this paper therefore includes some important points. Recently, the degree of liver fibrosis is reported as the most important factor to determine the prognosis of NAFLD (Gastroenterology 2015; 149(2):389-97). I would like to recommend the authors to cite this paper.
Classification: Grade C (Good)
Language Evaluation: Grade B: minor language polishing
Conclusion: Minor revision

Author response:

We appreciate the reviewer for this positive response. We discussed and cited the reference, Gastroenterology 2015; 149(2):389-97 in the discussion section.
