Retrospective Study

Extravascular findings during upper limb computed tomographic angiography focusing on undiagnosed malignancy

Romman Nourzaie, Jeeban Das, Hiba Abbas, Narayanan Thulasidasan, Panos Gkoutzios, Shahzad Ilyas, Leo Monzon, Tarun Sabharwal, Steven Moser, Athanasios Diamantopoulos

Abstract

BACKGROUND

Computer tomography angiography has been an established method for diagnostic vascular disease of lower limbs. Recently, the method is widely used for diagnosis of vascular pathologies in the upper limbs too. It also has increased the possibilities of this scans being reviewed by no specially trained radiologists. This increases the risk
