SPECIFIC COMMENTS TO AUTHORS

In this manuscript, the heterozygous missense mutation (c.949G>A; p.Glu317Lys) in exon 6 of the lamin A/C (LMNA) gene was identified in patient. And a remote monitoring device was given to the patient. The findings of this study has some clinical significance. In this manuscript, there are few descriptions about the remote monitoring device, and one of the main findings of this study is the remote monitoring device. Therefore, the advantages of the remote monitoring device over other device should be emphasized.

SPECIFIC COMMENTS TO AUTHORS

Thank you for asking me to review this case report. This is an interesting case and of educational merit. However, it is not clear to me how the remote monitoring played any role in the management nor what the significance of this case presenting during Covid-19 lockdown. It is a nice case of a LMNA mutation, and while not very rare is a good learning case. I would suggest that reference to covid and remote monitoring is removed from the title or the authors make it more clear why they are relevant. There is no mention which remote monitoring device is used. Was a treadmill test post PCI considered to assess if correcting the coronary lesion has resolved VT risk? If VT occurred post PCI should ICD not have been considered sooner? There appear to be 12 authors - this is a lot for a case report - they need to justify inclusion of such a large number of individuals. Minor points Lipothymia is not a common word - would be better to use 'syncope'. Bicameral also not commonly used - 'dual chamber bradycardia pacemaker' might be better.
