[] Grade E (Poor)		[] Existed	[] Major revision
		[] No records	

COMMENTS TO AUTHORS

In the present communication authors have touched upon pharmacogenomics which promises to be an important treatment modality in future. Prevalence of premalignant lesions like leukoplakia, sub-mucous fibrosis, erythroplakia, Lyken Planuse and other odontogenic diseases is very high in India. Also, human oral cancer remains the cancer with highest incidence in Indian males because of habits of chewing tobacco and allied products. Average 5 year survival rate has not changed for more than two decades, in spite of many advances in treatment modalities. In such a scenario personalised medicine will be of immense importance in the years to come. Therefore it will be important to highlight these aspects of cancer medicine by publishing and editorial on this topic. Authors have tried to cover all important aspects related to pharmacogenomics as well as different oral diseases including odontogenic diseases. The authors have good experience in the field of dentistry.
