## COMMENTS TO AUTHORS

This is an interesting study about Cripto overexpression in human colon cancer. Cripto is known to be highly expressed in lots of solid tumors including breast cancer and colon carcinomas. In this manuscript, the authors assessed the value of cripto as a novel target for colon cancer gene therapy. Some minor revisions are required. 1. The abstract should be re-arranged accordingly, aim, method, results and conclusion. 2. Tables and figures are very informative. 3. The text should be edited according to match the format of the journal. 4 Some minor spelling mistakes should be corrected.

### COMMENTS TO AUTHORS

Interesting paper, it can be published after minor revision. 1. The manuscript should be edited according to the journal policy. 2. Minor language polishing should be revised.

### COMMENTS TO AUTHORS

The manuscript entitled "Clinicopathologic and Biological Significance of Cripto Overexpression in Human Colon Cancer" by Peng-Cheng et al try to assess the value of cripto for colon cancer gene therapy. This manuscript is very interesting. The data is enough for the conclusion. Comments: 1 The manuscript need to be edited throughout to get the publishing standard. 2 Some minor spelling mistakes should be corrected. 3 The discussion is good, but it can be more deeper discussed.
